Asante Bicycle as a Service (BaaS)

Smart bicycle fleets and user gratification platform - delivered to employers, real estate and municipalities in monthly subscription fee model.

Bike-sharing systems delivered by businesses make bike commuting more accessible, build employee benefits and enhance real estate offers. We reduce upfront capital expenditure and in-house resources to implement and maintain the system.

Bike gratification platform award also non-fleet users for all their bicycle activities. Employers, smart cities or eco-engaged brands can build their bike competitions. This is for better green/fit branding, boosting wellness and productivity of employees and reducing air pollution and congestions in cities.

We aim to make cycling easy and smarter to motivate people to shift from cars to 13x greener bicycle transport. Thus we contribute to better future with smart human transportation in cities.
