The idea of Magplantex is a green eco-textile mat with magnetic properties which accelerate plant growth (vegetables and flowers) and with natural repellents. It is a mat that contains lettuce seeds which grow faster than in a traditional way but without any fertilizers and losses caused by snail activity.

The mat can be easily spread out on the ground, covered up with soil and watered. The mat is fully compostable and it contains magnetic grains which make plant grow faster by 30%. It also contains a composition of essential oils which is a natural repellent against snails.

There is no need to use additional fertilizers or pesticides.

This way even 30% of costs can be saved.
