RetroElectro combines the features of a scooter from the 60s with twenty-first century technologies.

The conservation of frame structure with a beautiful retro design allows to recycle over 80% of the product. Changing the drive unit to electric stops emission of pollutants and makes product maintenance-free and economical.

We give wide possibility of customizing the product - You can choose scooter color, artistic painting, different details material like: carbon fiber, wood and metal. Customer can pick motor power and required range of his RetroElectro.
